

Transmille provides a cost effective calibration service for Torque screwdrivers, torque analysers & Torque wrenches up to 1500 Nm. We can calibrate either 'click' type, 'breaking' type or slipping wrenches & hand torque screwdrivers.

Wrenches and screwdrivers are tested to British Standards specification and measurements reported on the certificate. For click type wrenches it is the 'Peak Torque' measurement that is recorded. The measurement unit is reported in centi Newton metre (c.N.m) Newton metre (N.m) for S.I units or pound force foot (lbf.ft) for imperial depending on the scale used on the wrench.

## Types of Instrument Calibrated :

- ▶ Torque Wrenches up to 1500nm
- ▶ Torque Screwdrivers
- ▶ Torque Analysers
- ▶ Torque Meters
